RAILONE PRESENTS NEW PRODUCT SOLUTION FOR CONFINED TRAFFIC AREAS

At the International Exhibition for Track Technology "iaf", which starts today, the Neumarkt-based group of companies will present a new product development especially designed for confined traffic areas as well as a variety of solutions from all four business divisions. Until Thursday, June 02, 2022, the international exhibition will run as a presence event at the exhibition center in Münster, covering an area of over 20,000m².

Neumarkt/Münster (Germany), May 31, 2022 - Known for particularly innovative and holistic customer-oriented solutions, RAILONE will present a new product development from the urban transit sector at the International Exhibition for Track Technology "iaf" in Münster, Germany. In places where existing buildings in historically developed cities mean that only limited space can be made available for the increasing volume of traffic, the MCT 20 metro sleeper offers a sustainable, reliable solution thanks to its low height and variable length. In addition to the real exhibits of the metro sleeper, the international group of companies will present the versatile solutions from all four business areas at the "iaf": Long-distance and Freight Transport, Urban Transit, Engineering and Plant Construction. "As a responsible and solution-oriented company, our main task is to understand the challenges of our customers and to develop reliable solutions of the highest quality for them," says Jens Kleeberg, Chief Sales Officer of PCM RAILONE AG.

Until Thursday, the group of companies will be presenting itself in Hall M, Stand 240 at the "iaf" in Münster, Germany. With the help of an interactive application, RAILONE will demonstrate product diversity, locations and international project references. Experts on site will be available throughout for interested parties to exchange information.
