RAIL.ONE at the InnoTrans 2016

RAIL.ONE will present itself at the InnoTrans Exhibition in Berlin in Hall 26, Booth 305. The InnoTrans is the leading trade show for transport technology and is taking place September 20-23, 2016. In addition to its comprehensive portfolio of modern track systems for rail transport, RAIL.ONE will focus on further internationalizing the company's business fields.

Neumarkt/Berlin, August 30, 2016 – "The Future of Mobility" is the theme of this year's InnoTrans. As a technology and quality leader in track systems and concrete sleepers, RAIL.ONE sees the future of mobility in a global context. That's why the company is continuing its strategy of recent years to expand its global production facilities.

"Our goal is not just to provide the best quality for every application. We also aspire to accommodate specific customer needs, including regional variances such as climate, geography, and local standards in different parts of the world," says Jochen Riepl, CEO of the group based in Neumarkt in the German state of Bavaria. This path is promising, as evidenced by any number of projects already completed in Germany, Saudi Arabia, Hungary, Romania, Turkey, and elsewhere in which customers have testified to the high quality of the track sleepers produced by RAIL.ONE.

At Booth 305 in Hall 26, RAIL.ONE will present its portfolio of railway sleepers and ballastless track systems for local, long-distance, and freight transport, along with plant construction and engineering services with newly designed interactive software that allows visitors to explore products and reference projects on their own.

At this year's InnoTrans, representatives of all subsidiaries from various countries in Europe, Asia, and North America will be on hand to contribute and share their collected experiences. Schedule a personal meeting to learn more about product specifications and the requirements of local markets and industries.
